Phone:

SIMP Required Data Elements

- Product Common Name: Product Alpha Code:
- Product Scientific Name:
- Harvesting Country:
- Geographic Location Code:
- Processing Description:
- Permit Number:

- Report each harvest event information **per day, per facility**. Provide the name and location of the aquaculture facility where the fish was harvested (AQF - Aquaculture Facility)

- If the fish/product was collected from multiple sites and documented as an “aggregated harvest” through an “aggregated harvest report”, provide the name of the person or entity responsible for the collection.
 - Aggregated Harvest Report: means a record made at a single collection point or processing facility on a single calendar day for aggregated deliveries from multiple small-scale aquaculture facilities, where each aquaculture facility delivers **1,000 kg or less** to that collection point or processing facility on that day. An Aggregated Harvest Report may not be used for information for deliveries of more than 1000 kg from aquaculture facilities.

- Net Quantity: The total landed weight of the harvest is required in the entry filing. The weight is the volume (in pounds or kilograms) of the originally unloaded or delivered catch. NMFS is aware that not all landed catch will be exported to the United States; however, the total catch volume is needed to verify that the harvest event was legal.

Fill out this table or provide a completed Model Catch Certificate, provided it contains all the same data

Date of Transfer	Net Qty Harvested	Unit of Measure	Name, Address of Aquaculture or Collection Facility	E-mail and Phone of Aquaculture or Collection Facility

NOAA performs audits on SIMP regulated products and may issue a fine for non-compliance. For more information view our SIMP Guidance document as well as the following information from NOAA.
